

Machine Compliance Test Unit

IEC 60974-4 Periodic Inspection and Test of Arc Welding Equipment – M.C.T. Unit.

IEC 60974-4 Safety Test equipment for a number of years now.

Over the last 18 months we have applied this knowledge to developing our own equipment.

It is a fully comprehensive system working with tried and tested hardware and easy to use software which steps you through the test process and ensures compliance with the Periodic Inspection and Test standard. This standard is familiar to most engineers as it is a requirement to carry out the test after any repair which restores a welding or cutting function. We have attached pictures of the unit plus sample certificates produced.

As some engineers already have a Calibrated Insulation test meter so we offer the kit with or without the Megger Test Meter. The test box has 3 available compartment sizes for your meter- 105x260mm, 145x260mm and 180x260mm.

If you do not have an Insulation test meter you will have to purchase the complete package – please note we use the very best quality test meter available. On something as important as this we feel the extra cost for guaranteed quality is money well spent.
